

تقرير نصف المدة التدريبية

Biweekly progress report

Name of Student :	Karam Abdulrahman dabalez
Student ID	422039493
Academic Department	CS
Name of Employer :	Ghoneim – Al Ghoneim For IT Services

Report for period of

6\28 to 7\10 for the year of 2025

Total number of hours is 8 hours per day for 6 days a week

1- What is my work and what I am doing in the training :

I am working as a trainee developer in the field of IT and software tools automation where I am tasked with creating useful small tools that help in daily file and data management within the organization.

2- For what I did for now is:

1- One of the most rewarding experiences I had was developing a tool that organizes files automatically into categorized folders (images, videos, documents) using Python with a simple GUI interface.

2- I also created a QR Code Generator application that lets users convert any link or text into a downloadable QR image, which was helpful for simplifying communication and sharing links.

3- I developed a PDF utility tool with two core features: merging multiple PDF files into one, and splitting one PDF into separate pages. Both features included a user-friendly interface and file save options.

3- Did I find any hard tasks and what is the environment like ?

Mainly nothing significant was disappointing. Everything went smoothly, especially after breaking tasks into small clear steps and testing features individually.

The environment is supportive and encourages learning. I had discussions with engineers about practical software tools used in real-world projects. We also shared feedback on UX improvements for small Python tools, which helped me better understand user experience considerations.

4- What will I do in the next 2 weeks ?

Start working on additional utilities like a To-Do List CLI app and Email Validator too

Organize what the company asked me to organize either it's a document or IT works as adding more features to the current work that I did or the next projects that I will make later

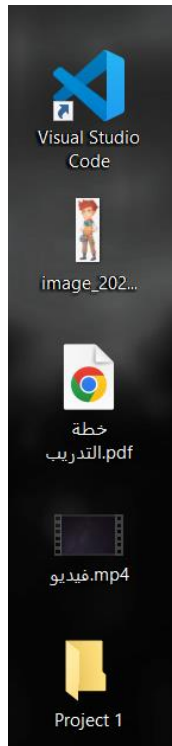

5- Other comments :

I would like to thank the company for allowing me to explore practical projects in a flexible and supportive way, and I also appreciate the university for requiring this type of hands-on learning experience.

Evidence of what I made :

First project :

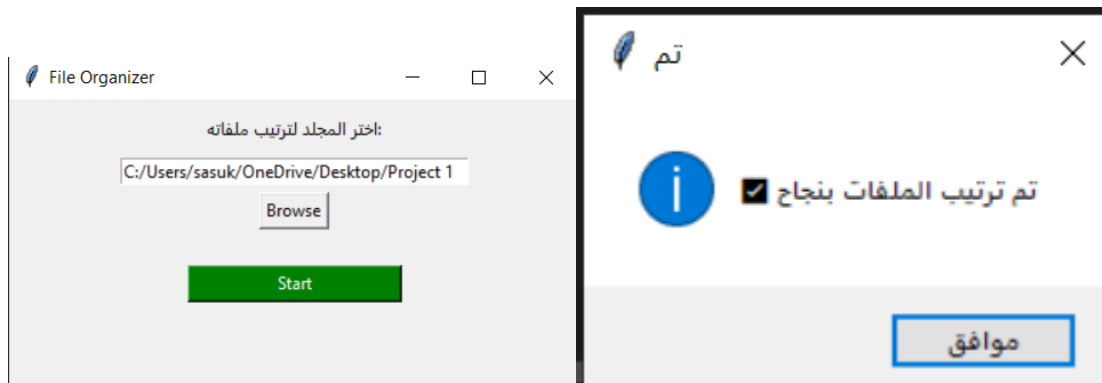

File organization

We put it inside the folder :

Then we launch the program and we will have :

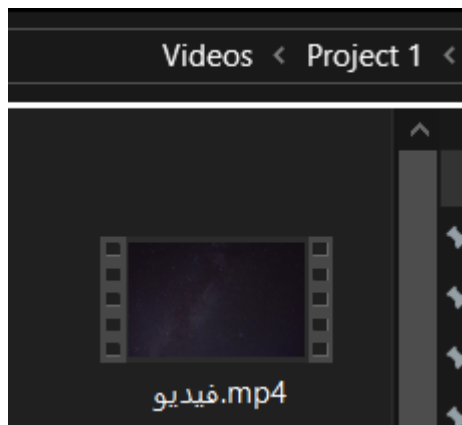

It will make it folders like that :

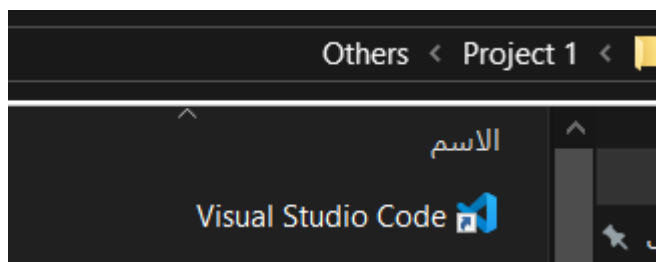

Inside each folder the thing that it connect to the folder we gave it to :

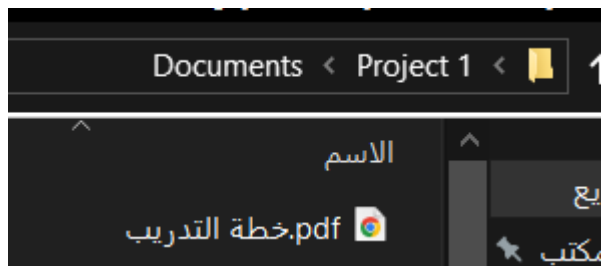

Videos :

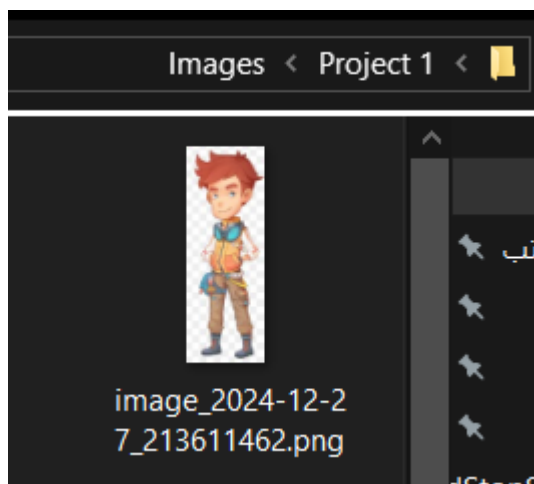

Others :

Documents :

Images :

The second project :

QR generator :

QR Code Generator

هدايا / OFF

\$25

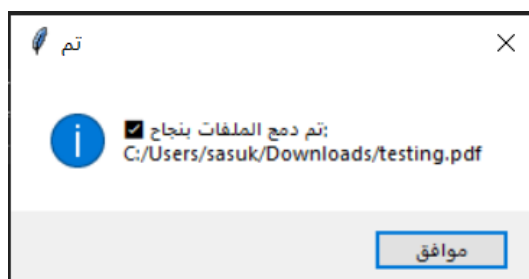

The third project :
PDF Merger and splitter

Select the document :

Save as :

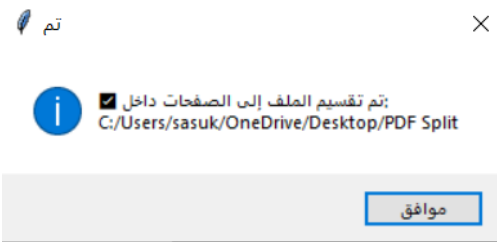

We can see now it exist :

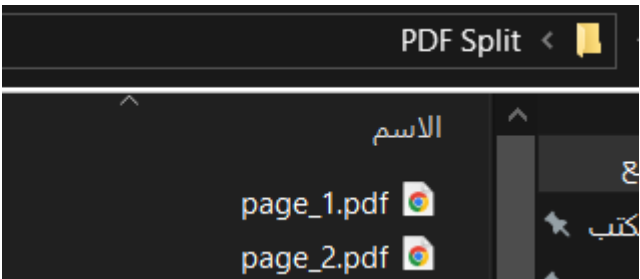

It contain both of the documents :

For splitting we choose the same PDF file that we merged :

We can see it now spitted
